

Detex V40 Installation Guide

V40 Exit Device Overview

The Detex V40 is a versatile exit device suitable for standard commercial doors. The V40 provides reliable egress control with alarm functionality integrated into a compact design.

Door Preparation

Install the V40 on doors prepared with standard exit device drilling. The device mounts to the inside surface of the door. Ensure door is structurally sound and properly sized before installation.

Step	Task	Tool Required	Difficulty
1	Prepare door cutouts	Drill, Saw	Moderate
2	Install top bracket	Screwdriver	Easy
3	Install device body	Screwdriver	Moderate
4	Connect push bar	Hex Wrench	Easy
5	Test operation	None	Easy

Through-Bolt Configuration

V40 devices use through-bolt attachment for maximum security. Through-bolts are typically located at top and bottom of the device. Ensure through-bolts are tightened securely to prevent device movement.

Alarm Testing

After installation, test alarm functionality by pressing the exit bar. Alarm should sound immediately. Verify battery operation and external alarm integration according to the complete wiring diagram.
