Falcon to Competitor Cross-Reference Guide

Overview

Falcon hardware correlates with major competitors. Cross-referencing enables specification flexibility and retrofit solutions.

Exit Device Equivalents

Falcon 25-R push bar equals Von Duprin 99. Both offer 36" standard width, through-bolt option, vertical rod integration. Falcon trim interchangeable with Von Duprin in many configurations. Verify cylinders and strike prep before substitution.

Mortise Lock Equivalents

Falcon MA series equivalent to Sargent 8200 series. Both ANSI F-series, pin tumbler cylinder. Trim interchangeability: Sargent 10 (knob) cross-compatible with Falcon knob trim. Verify face plate dimensions before retrofitting.

Strike Plate Compatibility

Standard ASA strike preps accommodate most Falcon devices. Verify strike box configuration matches device type (through-bolt vs surface). Reinforced strikes recommended for high-security applications.

Trim Interchangeability

Falcon lever trim fits all major mortise bodies (Schlage, Sargent, Corbin Russwin). Verify spindle length before ordering. Knob trim less universally compatible; verify with manufacturer.

Electronic Integration

Falcon electronic trim integrates with Wiegand readers and standard 12V access control systems. Similar to Von Duprin and Sargent electronic options. Request technical specifications for circuit compatibility.
