Stanley Track Hanger Installation

Stanley Sliding Door Hardware Installation

Sliding door systems utilize overhead track and hanger hardware supporting full door weight. Stanley systems accommodate various door sizes and weights.

Track Sizing Selection

- **4-6 feet:** Single track system, 400 lb capacity, suitable for office pocket doors
- **6-8 feet:** Single heavy-duty track, 600 lb capacity, residential bi-folds
- **8-12 feet:** Dual parallel tracks, 1200 lb capacity, commercial storefronts
- **Over 12 feet:** Reinforced track systems, custom engineering required

Hardware Components

- **Roller Hangers:** Ball-bearing wheels support door on overhead track, smooth glide operation
- **Floor Guides:** Keep door bottom aligned, prevent lateral sway, optional for some applications
- **Soft-Close Actuators:** Hydraulic dampers slow door closing final 12-18", prevent slamming
- **Pocket Door Frames:** Cavity accommodates sliding door panel, requires 1.5x door width space

Installation Tips

Mount track level within 1/8" across entire span. Hangers should glide smoothly with minimal resistance. Adjust floor guides to provide light contact without binding. Test full range before finishing installation.
