V-Line Combination Setup Guide

V-Line Simplex Lock Initial Setup

The V-Line Simplex mechanical push-button lock is the industry standard for high-security portals. Initial combination setup requires physical access to the lock mechanism.

Setting Initial Combination

- **Access Interior Mechanism:** Open access panel using factory key (included), exposes combination wheels
- **Select 5-Button Code:** Standard Simplex uses 5 of 10 available buttons (0-9)
- **Avoid Weak Combinations:** Do not use sequential (12345) or all same digit (55555)
- **Position Wheels:** Align each button wheel to desired setting, secure with provided screws
- **Test Operation:** Press buttons in sequence 3 times to verify reliable recognition
- **Lock Access Panel:** Return factory key, secure panel to prevent tampering

Quick-Access Technique

Professional installers can unlock faster by pressing buttons in rapid sequence without distinct pauses. Simplex recognizes button sequence by order, not timing. Advanced users achieve 1-2 second unlock time.
